PILE BREAKING & REBAR CUTTING IN ONE SINGLE MOVEMENT

If you're looking for an immensely powerful yet compact pile breaker, capable of fast reduction and rebar cutting, then stop searching... just call Sandhurst.

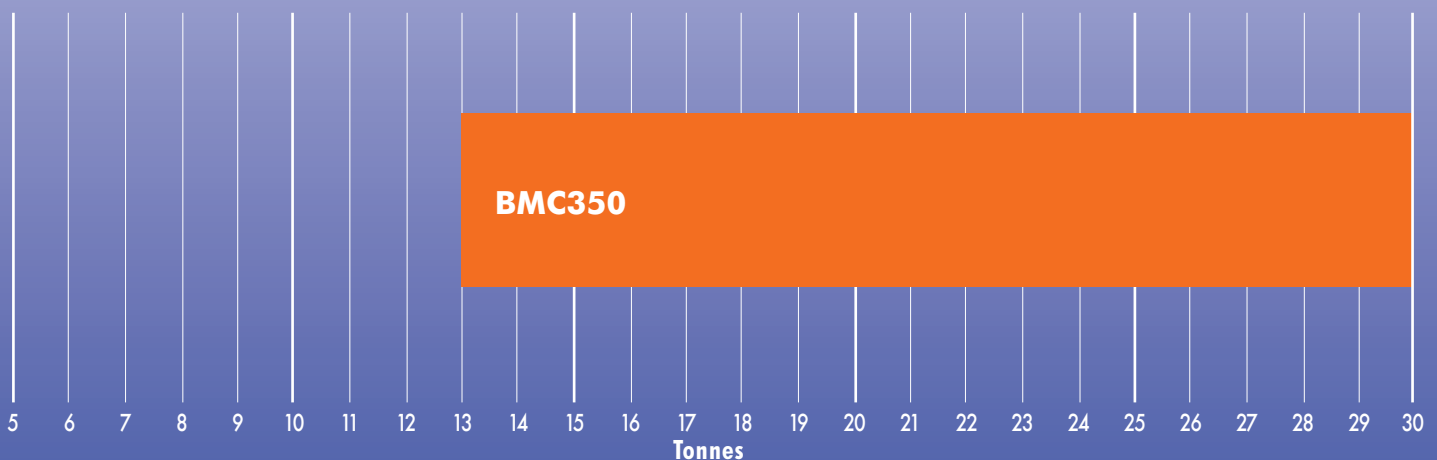

Compact enough to work amongst closely driven piles, or in trenches, our Cruncher pile breakers hang by chains from the dipper of any 13 Tonne + Excavator. They cut through single or multi-bar precast concrete piles, up to its max 350mm square pile capacity in seconds. And in one smooth movement can lift and load the cut-off pile section straight into a dumper for removal.

The Cruncher's secret is in its extraordinary powerful jaw action (60 Tonne breaking force) with twin Hardox cutting teeth and its ability to cut, contain within its body and lift up to 2.5M cut piles at a stroke, thus seriously reducing pile cropping time.

Best of all it gives you complete control. You can clean cut concrete and rebar eliminating the need for manual cutting with a Skill saw, or just nibble the pile and leave rebar undamaged if required. So next time you've got piles to tackle...

Call Sandhurst we've got the answer.
